

[2016-New Offering New 70-499 Exam PDF And 70-499 Exam VCE Dumps For Free Downloading (21-30)

2016 May Microsoft Official New Released 70-499 Q&As in GreatExam.com! 100% Free Download! 100% Pass Guaranteed! 70-499 exam questions and answers provided by GreatExam will guarantee you pass 70-499 exam, because GreatExam is the top IT Certification study training materials vendor. Many candidates have passed exam with the help of GreatExam. We offer the latest 70-499 PDF and VCE dumps with new version VCE player for free download, you can pass the exam beyond any doubt. Following questions and answers are all new published by Microsoft Official Exam Center: (The full version is in the end of the article!!!)

QUESTION 21 You are configuring a Team Foundation Server (TFS) Agent, which will execute an application on a Windows 7 desktop computer. You log on to the Windows 7 desktop computer as the user who will execute the test. The test controller machine and the Windows 7 desktop computer are in the same domain. You need to enable the TFS Agent to execute the application on the Windows 7 desktop computer. Which two actions should you perform? Each correct answer presents part of the solution. A. After performing the configuration steps, log off or reboot the Windows 7 desktop computer. B. Create a new test controller by using a local user account that is a member of the local administrators group. C. Add the user that was used to start the interactive process as a member of the TestAgentServiceGroup on the computer for the test controller for the agent. D. Use the Configure Test Agent feature, and select Interactive Process for the Run option. Answer: CDE Explanation:

<http://msdn.microsoft.com/en-us/library/hh546459.aspx> **QUESTION 22** Drag and Drop Question Your company is installing Microsoft Visual Studio Team Foundation Server (TFS) 2013 in a new environment. Your IT department has 110 developers, 25 business analysts, 50 testers, and 30 Scrum Masters who will access this new instance of TFS in various capacities. You need to configure the servers to meet the minimum TFS 2013 system requirements. What should you do? To answer, drag the appropriate minimum requirement to the correct component. Each minimum requirement may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Minimum Requirement	
Windows Server 2008 R2 Standard with SP1	
Windows Server 2008 Standard with SP2	
SQL Server 2008 R2	
SQL Server 2012 SP1	
Microsoft Office SharePoint Server 2010 Standard	
Microsoft Office SharePoint Server 2013 Standard	

Answer Area	
Component	Minimum Requirement
Server Operating System	
Database Version	
SharePoint Version

QUESTION 23 You have an existing deployment of Microsoft Visual Studio Team Foundation Server (TFS). The application tier and data tier are on separate dedicated servers. You need to provide redundancy to the application tier and increase performance. Which two actions should you perform? Each correct answer presents part of the solution. A. Set up a SQL Server failover cluster. B. Set up Network Load Balancing. C. Install an additional application-tier server. D. Ensure that the application tier and configuration database are on the same server. Answer: BCE Explanation: <http://msdn.microsoft.com/en-us/library/ee259689.aspx>

QUESTION 24 Drag and Drop Question Several of your company programmers are at a remote location. They are sharing files with the main office. You need to set up a Team Foundation Server Proxy at the remote location to reduce bandwidth usage. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Run Team Foundation Server Configuration Tool.	
Connect Team Explorer to Team Foundation Server Proxy.	
Connect to a supported SQL Server.	
Install BranchCache.	
Install Team Foundation Server Proxy.

QUESTION 25 You have upgraded an installation of Microsoft Visual Studio Team Foundation Server (TFS) 2013. You need to modify an existing project on which you want to enable portfolio management. What should you do? A. Update the application tier. B. Move team projects to a project collection. C. Update team projects with Team Explorer. D. Run the Configure Features wizard. Answer: D Explanation: <http://msdn.microsoft.com/en-us/library/ff432837.aspx>

QUESTION 26 Drag and Drop Question Your team uses Microsoft Visual Studio Team Foundation Server (TFS). You use Team Foundation Build to plan your build infrastructure. You want to configure two separate servers to handle your build load. Your team project contains ASP.NET MVC solutions. One solution needs a third-party control that can only be installed on a single build server. Your other solutions can be built on any build server. You plan to create a separate build definition for each solution. You need to configure your build definitions so that builds are routed with the correct components to the server. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions
Create a build definition for the solution that requires the third-party control, and set the Name Filter argument to be the same value as the Tag that is applied to the build agent.
From Team Explorer, access the Build Agent Properties dialog box for the server that has the third-party control installed, and add a new Tag to specify that it contains the control.
From Team Explorer, access the Build Agent Properties dialog box for the server that has the third-party control installed, and specify that it should only run the new build definition.
Create a build definition for the solution that requires the third-party control, and set the Tags Filter argument to be the same value as the Tag that is applied to the build agent.
Configure build agents on each of your servers.

Answer:

Actions	Answer Area
Create a build definition for the solution that requires the third-party control, and set the Name Filter argument to be the same value as the Tag that is applied to the build agent.	Create a build definition for the solution that requires the third-party control, and set the Name Filter argument to be the same value as the Tag that is applied to the build agent.
From Team Explorer, access the Build Agent Properties dialog box for the server that has the third-party control installed, and add a new Tag to specify that it contains the control.	From Team Explorer, access the Build Agent Properties dialog box for the server that has the third-party control installed, and add a new Tag to specify that it contains the control.
From Team Explorer, access the Build Agent Properties dialog box for the server that has the third-party control installed, and specify that it should only run the new build definition.	From Team Explorer, access the Build Agent Properties dialog box for the server that has the third-party control installed, and specify that it should only run the new build definition.

QUESTION 27Your software development team works within a single team project in a team project collection. You have one build controller and one build agent associated to your team project collection. Multiple build definitions are configured. You notice that builds occasionally wait in the queue for a long time before the build starts. You need to reduce the amount of time that your builds wait in the queue. What should you do? A. Change the Name filter argument on your build definition so that the build agent is found more quickly. B. Configure your build agent to run multiple builds at the same time. C. Configure additional build controllers, and associate them to the build agent already in use. D. Configure additional build agents, and associate them to the build controller already in use. Answer: B Explanation:

QUESTION 28Your company uses a dual-tier deployment of Microsoft Visual Studio Team Foundation Server (TFS) that is integrated with the SQL Server Reporting Services. You are responsible for monitoring server health and performance. You notice a spike in CPU activity on the application tier. You need to determine the cause of the CPU activity. In which two locations should you look? Each correct answer presents part of the solution. A. the TFS administration console B. the TFS Command Log table C. the SQL Server Profiler D. the activity and job history log Answer: AB

QUESTION 29Drag and Drop QuestionYour company has a Microsoft Visual Studio Team Foundation Server (TFS) 2013. The company uses a Microsoft SharePoint instance as part of the physical TFS setup. The IT department is configuring scheduled backups. You need to grant the system administrators the appropriate permissions to configure the scheduled backups. Which permissions or roles should you assign to the system administrators? To answer, drag the appropriate permissions to the correct system. Each permissions may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content

Permissions

Administrator

Sysadmin role

Member of the Farm Administrators Group

SharePoint Collection Administrator

Backup Operators Group

Answer Area

System

TFS

SQL Server

SharePoint

Answer:

Permissions

Administrator

Sysadmin role

Member of the Farm Administrators Group

SharePoint Collection Administrator

Backup Operators Group

Answer Area

System	Permissions
TFS	Administrator
SQL Server	Sysadmin role
SharePoint	Member of the Farm Administrators Group
